

Gagan Shri Nema

Sr. UX and UI Designer

Dynamic and innovative with **6+ years** of invaluable hands-on experience in handling several simultaneous creative designs projects, concept creation, web design, graphic design, Mobile App UX design, and visual conceptualization. As a UX/UI Designer, my objective is to make a positive impact on clients, co-workers, and I am using my skills and experience to design compelling and attractive websites. I enjoy working on projects that involve a mix of web and graphic design.

AREAS OF EXPERTIES

Hands-on experience of graphic and web designing the **Visual Design, Mobile App Layout Design, Website Layout Design, Responsive Website Design, Info graphic Design, Flyers, Logos, Social Media Banner,** and other marketing collaterals.

UI UX Design

UI UX Design is the user interface for an app, website, or other interactive media. My work involves collaborating with product managers and engineers to gather requirements from users before designing ideas that can be communicated using storyboards.

Mockup Design/Website Layout Design

Mockup design helps create products with great user experience. I am responsible for understanding what the users want from their device and then I design it so that they can easily find all its features without any hassle. We also make sure that everything works properly when combined in one package. I use Adobe XD, Adobe Photoshop, and other graphic tools to make creative mockups.

Mobile UX Design/Mobile App Layout Design

Mobile UX designers create user interfaces for apps, websites, or other interactive media. I collaborate with product managers and engineers at work to gather requirements from users before designing ideas that can be communicated, using storyboards. We also process flows or sitemaps. Then use your creativity while applying color palettes that conceptually best fits a particular design. I use Adobe XD, Adobe Photoshop, and other graphic tools to make creative mobile UX design.

Responsive Website Design

We create responsive web design web pages that look great on all devices! A responsive web design automatically adjusts to different screen sizes and viewports. Responsive web design is all about using HTML and CSS to automatically resize, hide, shrink, or maximize a website so that it looks good on all devices (desktop, tablet, and phone). This will set the viewport of your page, which will instruct the browser how to handle the dimensions and scaling of the page.
